

# **Research center of renewable energy with the approach of respecting the nature**

mahboobeh rouhi\*,

**the present thesis check out the design of research center that is the ancillary structure of the subject of it's inner activity, it is the notice to the energy and esibiring solutions to control the continental conditions in order to remind the mission of environmental collection not only at the spirit of internal activity but also at the body. The provided studies not only check out the building of the aspect of limited bond to the design but also as the bigger idea of umano comfort and mental and physical comfort and also how to creat an internal stable environment with fixed characteristics with foreign area in the area's situation and variable time. We have tired too see all the dimensions in the way that this building consistent with the nature in addition to creat a satisfactory area for human's activity actually it is a part of the nature and respects the nature. Modern architecture has been created by region, regardless to the compatible architecture and it has caused an increase in the consumption of fossil energy during the recent years. Using the ways of using up energy, finding and developing the ways to sync and match with their climate conditions seemed to be necessary for the optimization of using up energy. This treatise is a little attempt at the basin of architecture; a reminder about the necessity of searching at the basin of clear energy and sustainable resources.**

**Keywords : Research center of renewable energy respecting the nature**
