# Presenting a Strategy Safitey Pattern For Rural Settlements In Township Tehran

Seyed Habib Razi\*,

Rural human settlements as one of subs tracts and environmental hazards as natural phone menu are the most important issues of geography in the field of spatial planning. In this regard, the present study seeks to provide strategic model is the safety of rural settlements in the periphery of the big cites thus according to the ideals of achieving sustainable development, quality of life, wellbeing and social development and environmental, it is necessary to natural hazards and vulnerability to it in discussions on various aspects of planning and development and space in different levels of local, national and international reach this paper is a descriptive, psychology analytical and functional in purpose, data collections and data field (Questionnaire to the Delphi method) and documents have been conducted, data analysis, descriptive and inferential statistics, and model swat and AHP are done, the results showed that the Delphi technique in safety management of rural centers no pattern and there is no plan. The center in terms of safety and fire-fighting services are dependent on urban centers, re salting in damage to the stakes will be high at the center .correction analysis of the Tehran. Research also showed that no matter how rural centers are more dis advantaged in terms of safety services. The stakes are higher rural environment as well as employment and income dependency is the village to Tehran.
