

The role of economic indicators in determining the financial performance of Tehran Stock Exchange companies 2010-2014

Tayefeh Dousti*,

Abstract The financial performance of the active stockholder companies in stock and commercial paper markets can show the level of financial goals that they have realized for their different beneficiaries. Different elements take part in growth or reduction of financial performance and studying and recognizing them can result in optimum solutions. Therefore, the present study has tended to studying and specifying the role of economical indicators in determining the financial performance of companies accepted in stock and commercial paper market of Tehran. This research is practical in terms of purpose and academic-descriptive in terms of nature. Accepted companies in stock and commercial paper market of Tehran 1388 to 1393 are the research's statistical society, except the investment and mediator companies; which accordingly, the rest of profitable companies in the stock market in the meantime of the study form the research's statistical society which have been studied by systematic elimination of 207 companies. Also, the tools of statistical reports and financial statements of the studied companies have been used in collecting the research's database. Also, inferential statistics (regression analysis) is used in data analysis. According to the findings, economical indicators (size of the company, growth of the company, strength of the capital and human resources) have significant impacts on ROA and ROE as Tehran's stock exchange companies financial performance criteria.
