

رابطه میان ویژگیهای شخصیتی و ابعاد کمال گرایی با گرایش به رفتارهای پرخطر در بین دانش آموزان دختر مقطع متوسطه شهر خشکبیجار

giti mousa pour*,Dr. rouya babaee,

Abstract According to the research data of most adolescents, having high-quality parents has more risky behaviors than other adolescents. The present research is aimed at characterizing personality, dimensions of perfectionism with a tendency towards high-risk behaviors among high school girl students in the city of Khuzestanbijar, so that another step towards achieving preventive goals in increasing adolescent and youth compatibility is removed. Obviously, if the above goals are achievable, a clear and smooth way to reduce social harm is provided. The present study was descriptive and a correlation method was used to the research sample by random sampling. 330 female students were resident in the study area (15-17 years), study period (1394-1389), and resident using the Morgan table 181 female students of this region They were randomly ed. In this research, questionnaires (positive and negative perfectionism questionnaire Teri-Short et al. For assessing the risk of adolescents the risk scale of adolescents Persian Zadeh Mohammadi et al. - Five Personality Questionnaire in Iran by Gurosi (1998)) were used. Then analyzed using SPSS 20 software. The results confirm the research hypotheses.
