Designing a Recreational Residential Complex with a Therapeutic Tourism Approach

Tourism development is of the occurrences of the late 20th century that continues to speed in the new century. Now tourism has a special place in the national economy and has as activity in today's world can affect the process balanced development all over the world exhibited the attention of the whole range of planners and executives in all countries world is located. One of the goals that could create an incentive travel tourism, travel to health. Health tourism or medical tourism, a form of tourism that aims to preserve, improve or re-gain physical or mental health of a person for more than 24 hours and takes less than a year. Medical tourism or health tourism is a branch of medical tourism in the person than in the rest of the world travel to health centers benefit medical services in the destination country. In most cases, the purpose of medical tourism benefit lower prices for medical services or get faster service in other parts of the world. Since the 1990s, world-class tourism has grown steadily over the world for a variety of reasons such as globalization and trade liberalization in health services, the improvement of the quality of medical equipment, the advent and expansion of the Internet, and the advancement of information technology. This field is underway between the countries of the name in the field of medical services, but they can also find a desirable position in the world health tourism market as a complex and growing industrial industry for their country in the shortest possible time. In the meantime, there should be a number of resorts that tourists can stay in and use of medical services. Possibly, if these sets are designed and constructed to withstand medical treatments, they can offer tourists more suitable services.
