

# **The investigation of relationship between board independence and export behavioral in family firms**

raziyeh nasiri sheykhali basti\*,mohammad aghaei,

**The main objective of this study was to investigate the relationship between board independence and export behavioral in family firms listed in the Tehran Stock Exchange. For this purpose, in this study, data 85 companies during the years 1389 to 1394 were studied. In order to test hypotheses of multivariate regression analysis and generalized least squares (GLS) and F-test was used Limer and Hausman test. The results of the test hypotheses showed that there is a significant relationship between the family control and export extremity and volume, while we had expected the coefficient of model is negative ,hence , the first and second hypotheses not be confirmed. and The results showed that there is no significant relationship between independence boards and export extremity and volume hence the third and fourth hypotheses not be confirmed, moreover the results showed that there is no significant between interactive effect in independence board and family control and export extremity and volume so the fifth and sixth hypotheses not be confirmed too. Finally, results of the test showed that there is a significant relationship between the foreign board and export extremity and volume. hence, seventh and eighth hypotheses be confirmed.**

**Keywords : Keywords: Family firms, board independence, export behavioral .**
