Abstract : Present study was operated aiming at determine the relationship between job consent (satisfying) and life with health of mind on teacher at elementary schools at Astaneh Ashrafiyeh . Population of this project are : all teacher (male and female) at elementary school of Astaneh Ashrafiyeh in 2015-2016. The population include 736people ; 120people were ed through cluster- random mmethod as a statistical sample. Questionnaires of job consent of Kandal and Halin , life satisfaction of Dinner and his colleagues and public health of Goldberg and hiller were used as tool. Project data was analysis by Pierson`s correlation method and step by step linear regression . Result have shown that there is positive correlation between head and mental health of teachers to the amount of 0.20, between colleagues with mental health of teachers to the amount of 0.53 and between wage payment with mental health of teachers to the amount of 0.39 these correlations also are known as meaningful relationships . In addition there are meaningful relationships between life satisfaction and mental health of teachers to the amount of 0.34, and between head with life satisfaction and mental helath of teachers to the amount of 0.28. Between colleagues with life satisfaction of teachers to the amount of 0.55. Also between promotion with life satisfaction and of teacher to the amount of 0.49 and between wage payment with life satisfaction of teachers to the amount of 0.34 these are known as positive correlation as well. So we can conclude that life satisfaction of teachers will be increased through increasing satisfaction of head , colleagues , promotion and payment (wage) . There is no meaningful relationship between nature of work and life satisfaction of teachers.
