

Relationship between social support and mental well-being with satisfaction of veterans' lives

Amaneh Jouyandeh*,

The present study was carried out to investigate the relationship between social support and mental well-being with satisfaction of veterans' lives in Rezvanshahr city. The statistical population consisted of all veterans in Rezvanshahr City, 1394. For this purpose, the present study was carried out with correlation method. The number of samples was 120 according to the statistics. They were ed by "Available" method. The research tools were Reef Psychological Well-Being Questionnaire, Social Support Scale and Life Satisfaction Questionnaire. Structural validity of this questionnaire was done using Cronbach's alpha coefficient and Cronbach's alpha coefficients showed the internal consistency of their components. The data were analyzed using descriptive and inferential statistics, Pearson correlation coefficient, and multiple regression using software 24spss. Findings showed that there is no relationship between life satisfaction and social support. There is a significant relationship between the components of psychological well-being and life satisfaction. The variables introduced in the regression model only accept themselves significantly (P

Keywords : Key words: social support, psychological well-being, life satisfaction, veterans.
