

Analysis of geo-economical components affecting the development of regionalism in the Islamic Republic of Iran

naghi alah bakhshi*,

Due to the geostrategic importance and special geographical location of the Islamic Republic of Iran, its position in the two major energy spheres (Caspian and Persian Gulf) has a special position and can be considered as superior regional power and to create convergence And blocks play an effective role. Investigating the influential geo-economic factors of Iran in regional organizations and identifying the situations of cooperation and finding common ground among the member states of regional organizations to promote the geopolitical role of Iran for specific purposes of this research. With these goals, the intention is to answer the main research question: "What is the relationship between the geo-economic potential of the Islamic Republic of Iran and the development of regionalism?" In response to this central question, attempts have been made to examine the following assumptions: - The ability of the oil and gas engineering can affect the geo-economic development of the Islamic Republic of Iran. - Geographic location can affect the geo-economic development of the Islamic Republic of Iran. Due to the nature of the research, the method is descriptive-analytical, using the data collection method as a library, and using research tools such as a table and map and, if necessary, charts will be used.

Keywords : Key words: Iran - Regionalism - Geopolitics - Convergence
