predict goals orientation based on fear of positive/negative evaluations and personality traits in students Supervisor

samaneh gholipour*,hamidreza vatankhah,

This study was performed to predict goals orientation based on fear of positive/negative evaluations and personality traits in students. Research method was correlation, and statistical population included all university's dormitory girl students of Karaj Azad University in 2015-16(1394-95.c.) whom 150 persons were ed by cluster sampling. Research instruments consisted of goals orientation questionnaire (Elliott and McGregor, 2001), fear of negative evaluations questionnaire (Lari, 1983) , fear of positive evaluations questionnaire (Weekz, 2008) and personality traits questionnaire (McCrae & Costa, 1985) . Data analysis was performed by use of hierarchical multiple regression. The results of multiple regressions showed that the fear of negative-positive evaluations and neurotocism negative explain mastery/ approach and mastery / avoidance and positive explain mastery/ approach, mastery / avoidance, performance-approach and performance / avoidance (p
