

Comparative Analysis of Sustainability Levels in Rasht Townships (Case Study: Manzarieh, Eynak)

Nasrin Gholami*,

Experience has shown that urban sustainability has received a great deal of global attention, while this issue has not been fully addressed in Iran. The level of urban sustainability can show the quality of life in cities. The assessment of the localities and their developmental bottlenecks in terms of sustainability and sustainable development in cities is one of the issues recently raised in the urban planning culture, but still in our country Not well To this end, the overall aim of this research is to analyze the comparative levels of sustainability in urban neighborhoods of Rasht (case study: Neighborhoods, Aynak). The statistical population is the above-mentioned neighborhoods. The sample size was determined using Cochran's table and the questionnaire was written randomly. In this study, the data were collected by field and library According to the studies conducted in this study, it can be concluded that turning to the issue of local development in the city is necessary and that health, well-being and quality of life should be considered in the city's neighborhoods in development should plan and Urban managers gain deep knowledge and insight into the issue order to solve many urban problems. The process of the city and the attention to the principle of sustainability in the city, considering the role of planners and city managers, can pave the way. In this regard, in order to achieve as quickly as possible, the development process and especially sustainable neighborhood of sustainability in cities.
