# **Analysis of the relationship between road accidents and tourists on a warm period in Gilan province in recent decades**

Rashid Dehchaei\*,

One of the most important issues of scientific research in developed countries is the high social and economic costs of road accidents, which is far more important for developing countries, and especially for Iran, which is at the top of the road accident rate table. Because the number of accidents in the country is not only increasing, it is imposing significant direct and indirect costs on the country, despite the severe shortage of financial and economic resources compared to other countries, and in particular the developed countries. The purpose of this study was to investigate road accidents and their relation with tourists during the warm months of the last decade. The study is a retrospective descriptive-analytic study which was extracted by referring to the archives of the last ten years. The statistics of road accidents were analyzed and analyzed using SPSS-23 software and values of P
