

# **Environmental spaces Assessment With the approach of urban comfort & environmental impact (district 1 and 2 in Rasht)**

Mohsen Charejoo\*,

The city's public spaces play an important role in creating identity and relaxing in cities. Environmental comfort is one of the most important components of human environments for living. The city is a large house and, as a home has the qualities and benefits to make living and living desirable and comfortable, the city must also have quality and features to provide comfort, convenience and security. In this regard, the answer to the question of whether urban spaces in the first two regions of the city of Rasht have the characteristics of comfort and welfare of citizenship? And also the study of urban characteristics in the two regions of the city through the determination of some environmental indicators of urban space and comfort an environment has been investigated. The scope of our study in this research is district 1 and 2 in Rasht, which according to the latest census (detailed plan, 1392) has a population of 254500, which is the criterion for choosing these two regions of age (having ecological and non-planetary conditions) as well as measures Current engineering (District 1) has been at the present time with urban management. Statistical software and Topsis model have been used to compare the two regions in terms of research indicators. The obtained result shows that there are some advantages in both regions and there are some deficiencies in some indices. One of the most important problems in some neighborhoods of both regions is the existence of electrical cables the light beam beams, the lack of retreat of some buildings, the presence of inappropriate pavements in the streets and alleys, the lack of attention to beautify the facade of buildings, the lack of green space in the design of spaces External buildings and disregard for the width of the passage while at the same time selling high density in some neighborhoods as well as traffic.
