

The Role of Mass Tourism in Waste Production in District 1 of Rasht on Nowruz Holiday

Peyman Bazdidi Tehrani*, Mr. Ali Abdollahi,

The present study uses a descriptive and analytical method along with library studies, Osandi and Meidani to investigate the role of mass tourism in the production of waste in the region of Rasht in the context of the Neuroscience. The purpose of this study is to examine the impact of massive production in waste production and production management on mass consumption. Based on available documentary data in the year 1394 is the first one with 1021. 77 tons of waste among the other regions with the highest amount of waste, and then the fourth area with the 511. 84 tons of waste in the second place. Documentary data in different months of Rasht indicate that in this area, one of the city's masters of Asfand, 108 tons of waste have the highest amount of waste in 1394, and since then, Farvardin and Marmoty month have garbage, respectively. In Azar, 69. 8 tons of rubbish and the smallest waste per month are in the month. The three-month documentary data indicates that in 1395 the city's district 1 has 224. 5 tons of waste with the largest amount of waste and the 5th area with 43. 7 tons of waste has the least waste in the current three months. The results of the survey show that the services provided in the area of a city of Rehest are appropriate and planned for the collection of waste, but the conditions for the collection of waste in this area have not been very good. The documentary evidence suggests that in 1394, most of the waste was in the area of April and March, and it seems that tourists have contributed to the increase in waste this year. However, the increase in waste in March of March could be attributed to other factors, such as washing and faucet. However, the statistics of the month of 1395 indicate that during this year, tourists do not play a significant role in the production of area one. However, the opinion of residents and respondents of the statistical community indicate that in this area, the increase of tourists has a significant impact on the development of the city of Shahr Rasht, and production in the area has a very high

role in pollution in the city of Rasht. In sum, In rural areas, the increase in the number of tourists has had a significant impact on the recovery of wastes waste disposal, resulting in a significant reduction in the development of the tourism industry in the city of Rhodes. In total, according to the available data in the Archives of the District 1

Keywords : keywords: Massive tourism, Garbage, Nowruz holiday, District 1, Rasht city
