

Analysis of the realization of the unity of the Islamic world based on the Shiite geocaltrachet pattern

Samira Ahmadi*,

The preservation of unity and coherence of Islam has always been one of the greatest things that has provided the path of excellence and dignity to Muslims. Helping out Islamic beliefs and values is one of the most important factors in the formation of unity and convergence among Islamic countries. In fact, relying on shared values and beliefs, it is possible to exploit the existing capacities of the Islamic world in order to preserve and promote the interests of Muslims. Shiite geocultural capacities can also be regarded as a significant part of these Islamic beliefs and values. On the path to achieve this unity. This thesis attempts to answer this question using a descriptive-analytical method and using library studies. What are the components of the Islamic geochemistry pattern in the realization of Islamic unity? According to the above question, the following hypotheses are presented: □ The prophets' sire can act as a Shia geochemistry pattern in realizing the unity of the Islamic world. □ The pattern of the rule of the velayat-e faqih can be influenced by the Shiite geocultural pattern in the realization of the unity of the Islamic world. Achievement of these goals is also considered by the author: □ Explaining the impact of Shi'a geochemistry on the realization of the unity of the Islamic world □ Explain and explain the barriers affecting the Shiite geocultural pattern on the realization of the unity of the Islamic world. □ Provide a suitable strategy for exploiting Shiite geocalctics in order to realize the unity of the Islamic world In the following, while trying to explain the geocultural pattern, its role in realizing the unity of the Islamic world has been tried.

Keywords : Geoculture, Shiite, Islamic World, Unity, Religion
