

Economic Evaluation of Production of Healthy Farming Products in the Poultry Subdivision in Guilan Province

reza poorfazi*,

Abstract: The livestock and poultry sector accounted for more than 32% of the total value added of agricultural sector during the period 1990 to 2001 and more than 10% of the total gross domestic product of the country during the period. The sub-sector also has a special position with a direct and indirect employment of around 2.5 million people and, given the role it plays in providing the livestock protein needed by the country, Among the various activities of the livestock and poultry sub-sector, the only share of the poultry industry, including poultry and eggs, and industrial dairy farms, and its lateral activities, is about 700 thousand people, accounting for more than 20 per cent of the total employment in sub-sectors. Given the importance of producing healthy crops In recent years, poultry consumption has become a major part of the people's food basket Which is subject to economic evaluation in this section.

Considering that so far this research has not been carried out in this country, this research is aimed at an economic assessment of the production of healthy crops in the poultry sub-sector. The research method is a descriptive analysis and method of collecting information by field and library The indexes studied in this study include the cost of chickens freight fares, the percentage of the cost of consumed doses of sales, the percentage of cost of drug in relation to sales, the percentage of cost of vaccine against sales, the percentage of disinfection costs to sales, the cost of materials to sales, Percentage of production costs compared to sales, the percentage of total costs to sales, was the percentage of profit (loss) specific to sales. Which according to the results, has a significant difference between two production groups in all variables. **Keywords:** Economic Evaluation, Healthy Products, Agriculture, Poultry, Guilan Province
