
The role of medical forensic crime scene

parisa hasanzade*,morteza rahbar,

Abstract Considering the role of material and non-material reasons on the crime scene to prove crime and the identification of the perpetrator or the innocence of those who are unduly accused, Maintaining and scrutinizing the crime scene and collecting the evidence of the crime in it is very important. The crime scene is the place the perpetrator has committed his unlawful actions and it contains valuable evidence to help to track off crimes. In the meantime, with the increasing complexity of crimes, forensic medicine science with access to the most advanced equipment and the latest specialized laboratory methods has decided to increase his contribution to the scientific discovery of crimes and build a solid foundation for issuing judgments the country's judiciary. The main objective of this research is to identify and explain the role of forensic medicine in documenting the crime scene and the scientific discovery of crime. **Keywords:** Forensic Medicine, Crime, crime scene, fingerprinting, blood spot.

Keywords : **Keywords:** Forensic Medicine, Crime, crime scene, fingerprinting, blood spot.
