

# **Design of a City Hall with an Approach to Upgrading Social Interactions of Bandar-Anzali**

Yassin Farhang Ara\*, Dr. Farzaneh Asadi Malek Jahan,

**Social life today has actions and interactions that can affect the quality of the space in which these communications take place. The communal spaces are in the direction of such communication. The city hall as a sample of this study is one of a kind of communal spaces that its design can be effective by creating social interactions on its quality. One of the shortcomings of Bandar-E-Anzali is the lack of space for meetings, gatherings and a place for healthy social interactions. The goal in these spaces is to create a coherent community that is close to the culture of the people. The plan seeks to create a dynamic atmosphere to support people. Attention to the audience of such a space and the efforts to promote communication and interactions between them - as one of the important principles of the quality of life of today's generation - is one of the most important goals of the present research. Considering the role of architecture and design in creating such a space, two hypotheses have been proposed in this research, and physical components (physical environment and its related characteristics) as well as psychological components have been examined through a questionnaire. This research attempts to identify factors influencing social interactions in the city hall by conducting library, field, and descriptive-analytical methods and emphasizing on the interactive process between the individual and the place, and then, by presenting suggestions to increase the quality of such Spaces take a step.**
