
Investigating the Impact of Manpower Training on Iran's Economic Growth

seyed reza sabet ghadam*,reza zarei,

Abstract The relationship between education and economic growth is one of the important issues in the economic literature. Marshall considers investment in human resources as the best type of investment. According to Adam Smith, humans are transformed into capital by education, and society can better use their productive potential. The objective of this study was to investigate the effect of human resources training on the economic growth in Iran. This research is a descriptive study in which we aim to describe the relationships between variables (dependent and independent) using statistical tests. It is applied research in terms of objective. In the present study, the time series method has been used with eviews software given the nature of the data. After examining the classic assumptions, the model was estimated. According to estimate, there is a significant relationship between the index of elementary registration and economic growth in Iran. The results also showed that there is no significant relationship between physical fixed capital and economic growth. **Keywords:** economic growth, education, human resources, fixed capital

Keywords : Keywords: economic growth, education, human resources, fixed capital
