
The survey of effect of financial development on poverty in Iran

Mahdiyeh Jahedi Delivand*,

Poverty is the inability to meet some needs, and many poor people still live despite the implementation of various poverty reduction policies. Poverty reduction has become one of the major goals of the world, and in this framework, the loss of poverty as one of the main pillars of the millennium development goals has been considered by the international community. Therefore, the purpose of this study is to investigate the effect of financial development on poverty in Iran. The methodology used in this research is the post-event type and uses past information. The statistical population of the present study is Iran. The sample consists of a 32-year period 1981 to 2012. In the present study, the time series method was used with eviews software according to the nature of the data. The results of the research showed the indicators such as financial development, per capita income, human capital and economic freedom are effective in reducing poverty in Iran.

Keywords : financial development, human capital, economic freedom, poverty
