

Analysis of Influential Components on the Development of Islamic Geochemistry in Rasht

samaneh deshmir*,

Geoculture represents the culture in which systems, schools, ideologies operate and it can affect. Geoculture research can have a very effective role in advancing the goals of the community. The topic of geoculture or culture in human societies is one of the most influential issues which has affected all aspects of social life and can result in a quantitative and qualitative improvement of a community or even a decline in society. In the country, areas can have a strong and effective presence which has a strong and rich culture. The present study also analyzes the components affecting the Islamic geoculture of Rasht city. Therefore, analyzing and determining the number of each component and calculating their share of percentage in comparison with the sum of the components affecting the development of Islamic geoculture in Rasht is the basis for answering the following question: What are the components affecting the development of Islamic geoculture in Rasht city? In this regard, the following hypotheses will be evaluated: A) Sacred places can be effective on the development of Islamic geoculture in Rasht. B) the landscape of national, cultural and educational places can be effective on the development of Islamic geochemistry in the city of Rasht. Accordingly, the purpose of this thesis, firstly was to identify the components affecting the development of Islamic geoculture in Rasht, how the distribution of the factors influencing the development of Islamic geoculture in Rasht city and then provide a suitable strategy and model for the development of Islamic Geochemistry in Rasht. Findings of the research indicate that among the 14 components considered in accordance with the cultural indicators of the levels of national divisions, the factors influencing the development of Islamic geoculture in Rasht were two components: A) Religious components include: mosques, missions, martyrs, martyrs, seminary education. B) National cultural components include: libraries, cinema, public education, higher education, museum, monuments, sports complex, cultural complex,

television network. Among religious components of the board component with 760 delegations and 48, 38% share, among the national cultural components, the general education with 1343 schools and the percentage of the percentage of 83% were the highest.

Keywords : : geoculture, geopolitics, Rasht, national cultural places, holy places, Guilan province
