
Design Disaster Management Center Of Rasht With The Approach Passive Defence

hamid mardani*,

the beginning of creation, man has grown up among threats, and has considered various measures to deal with them. And in recent decades, the process of confronting these threats has become more scientific, and specifically the probability of occurrence, the amount of damages and how to deal with them. Therefore, considering the importance of controlling the disasters caused by unexpected events and their significant impact on the quality of living conditions of the people of the community, studying and researching in the areas of crisis management is one of the prerequisites for the preservation and development of welfare and social progress. Regarding the geographical location of the province of Gilan in terms of the potential of natural disasters, due to its location along the Alborz mountain range and the significant rain rainfall, numerous riverbeds and vegetation retreat, the risk of flooding and, on the other hand, the geopolitical position of the province due to the boundary Being able to access and attack more easily through the sea, studying and studying the conditions of the crisis and how to control it is necessary. Therefore, with the aim of creating a place to focus activities related to accidental accidents, taking into account specific architectural arrangements, providing the appropriate equipment and facilities needed to study all types of threats and practices to control them, and assuming that the defense measures Inactive, such as initial, retrofitting, rebuilding, and fortification can help maintain critical facilities and critical facilities of the crisis management center, and the overall structure of the building, including the overall shape, color, and materials of the material, play a significant role in improving the performance of the defenses. In this research, we tried to study the case studies and factors influencing the subject through qualitative research method and achieve deep knowledge and descriptive of the studied subject.

Keywords : Keywords: Disasters, unexpected accidents, passive defense, crisis

management
