
Stock market liquidity review on corporate growth and business cycle

narges pour nour ali*,

Abstract The economies of each country are made up of two parts at a macro level. The real system in which the production and supply of goods take place, and includes two commodity markets and human resources. Establishing a balance in commodity markets and human resources will bring about economic equilibrium, the growth and prosperity of the economy. But the investment and production of goods requires financing. That's why the real system is in balance with the financial system. Because the financial system collects funds individuals with a surplus of resources and provides funds to individuals and entities. In this way, it is the task of the optimal allocation of resources by pushing financial resources towards productive economic activities. The purpose of this study is to examine the liquidity of the stock market on the growth of companies and the business cycle. The spatial domain of the research of the companies accepted in the Tehran Stock Exchange and the territory of this period is six years between 1389 and 1394. Also, multivariate regression analysis has been used to analyze and test the research hypotheses. According to the results, there is a negative and significant relationship between liquidity of the stock market and the business cycle. There is also a negative and unnecessary link between stock market liquidity and economic growth.

Keywords : Keywords: Liquidity, Corporate Growth, Business Cycle
