

# **The analysis of the physical expansion of Masouleh city in the last two decades**

sheida niyakan\*,

**In recent decades, the cities of Iran have undergone remarkable changes, as in many other cities in the Third World . Among these developments was the increase in the area of the city, which Masuleh city, like many other cities in the country, has not been immune to these developments. In this research, the research method is descriptive-analytical and collection method is a field and library. Using satellite imagery and existing maps, we analyze the trend of physical expansion of Masouleh city in the last two decades. The statistical society of Masouleh city is. The results show that masulele has been much more crowded than it was today, but it has been decreasing over the decades after the population, and only in the seasons of tourism people use the buildings. Therefore, it can be stated that in During the first decade, the year 1375 was a residential use more than 1395In the next few decades, some of them are destroyed. Land use shows that 40.66 percent of the total number of parts and 18.79 percent of the city's parts are used for residential use, which indicates its dominant role. The plurality of business and catering units show the reliance of the city's performance on the income of cafes and restaurants and shopping activity. The area of Masouleh city has been made with Kennedy due to its historical texture during several decades. In the first decade, this city has an area of 87098 square meters which has grown over the years for three decades, western and southern parts of the river Added to the city's complacency Which has an area of 6526 square meters and south and west of 29,614 square meters, has been added to the city's area, which is dedicated to the use of parking graveyards and scattered spaces, and is still under development. In total, there is a slowdown for the city.**
