

Investigating the Impact of Granting Grants on Non-oil Export in the Country (Case Study: Non-oil Exporter Companies Accepted in Tehran Stock Exchange)

Elnaz Mohammadzadeh*, Dr. Mosa Rezvani Chaman Zamin,

Crude oil exports, due to fluctuations in the prices of this product, in the global market, cause fluctuations in GDP, per capita income and other economic variables in the country. In Iran, due to restrictions on the financial market, one of the most important and accessible sources of funds for corporations is banking resources, for a country like Iran, the need for efficiency in the production and export of non-oil products seems significant, as improving non-oil exports can have a positive impact on macroeconomic variables. Therefore, the present study aims to investigate the impact of granting credits on non-oil exports in the country and has been studied in non-oil exporting companies listed on the stock exchange which is an applied-descriptive research. The statistical population of this study was 501 non-oil exporting companies listed on the stock exchange. Using a random sampling method (systematic elimination), 130 of them were studied as statistical samples. To collect the required data, a researcher-made questionnaire (after determining the validity and reliability) was distributed among managers, supervisors and experts of non-oil exporting companies to evaluate each of the components and sub-components. After analyzing the data, in the final step, using the Laser Level 8.8 software, the necessary discussion and conclusion was made. The results of the research, using confirmatory factor analysis, while confirming all the research hypotheses, showed a positive and significant effect on the non-oil exports in the country (path coefficient 0.53). Key words: Granting credits, Non-oil exports, Tehran Stock Exchange, Bank facilities
