

Designing Eco-tourism Resorts in the Village of Leilakouh with Approach of Contextualism

Elham Ghorani Noshad*,Mohsen Roshan,

The most important achievement of recent times that has been created as a result of technological progress is leisure-time. For that, tourism has received attention of people as one of the ways for leisure-time activity. Responding to the needs of local tourism would endanger the rural nature, and affects host habits and ecosystem of the region. Also, the construction of residential buildings without considering the context, cultural and indigenous values makes the figure of towns and villages strange for the residents, and it results in creating an undesirable face of the city. It seems that residence with indigenous and traditional structure can physically act in solidarity with rural areas. Achieving a good design that is consistent with the Eco-tourism resorts requires understanding values in the context. Here, the study of physical factors is one of the most important factors affect adaptation to the context. In this study, we will discuss the above factors. The present study has an applied nature and a descriptive-analytic methodology is used. Architectural information related to the tourism, contextualism, and respective architectural spaces is collected using books, articles and Internet resources. It is expected that creating Eco-tourism resorts with contextualism approach and tourists interact with the natives leads to make opportunity for everyone to enjoy the nature and interaction with local people and learning the local language and testing local cuisines. Also, it makes the opportunity for people to refresh themselves with simple and naive facilities. Furthermore, this leads to create harmonious infrastructure and urban identity with motivating local people to conserve natural resources and cultural and architectural values specific to their region and habitats.

Keywords : resort design, contextualism , Eco-tourism, tourism
