
Environmental Hazards and its Effects on the Rural Tourism of Imamzadeh Ibrahim Shafteh

Samane Musavi*, Dr. Bahman Ramezani,

Natural disasters do not necessarily occur due to floods, earthquakes, storms, and so on. But even an epidemic can be recognized as an accident and risk. Since the occurrence of natural hazards heavily on the performance of a society and the people it affects and may be irreparable losses economic and environmental, so the functions of the society Nyztht impact has been and numerous industries that include tourism industry to the community to interfere with the And it may even destroy it. The purpose of this study was to identify the environmental hazards of the village of Imam Zadeh Ibrahim and identify the impact of tourism on the environment of this beautiful village. Imamzadeh Ibrahim Village Despite the fact that the tourist and local authorities are paying particular attention to local and urban issues, it is one of the main problems that each of these problems requires coherent planning. Among the problems of the village of Imamzadeh Ibrahim are problems related to natural resources, slope of topography, river flooding, inappropriate communication bridges, parking problems and vehicle movement, unauthorized construction, collection of surface water of sewage, lack of attention to traditional livestock and its adaptation With the products available to tourists, the disappearance of handicrafts due to the availability of inexpensive Chinese goods, the existence of conflict zones, differences in the culture of tourism, the prevalence of various social anomalies. This is due to many natural and financial hazards that have been identified such as natural hazards such as flood, drought, frost and rainfalls, rain, wind turbine, thunderstorms, earthquake hazards, earthquakes, mass movements, landslides, landslides, creep, erosion, mass erosion Critical differences between tourists and non-residents, land use changes, traffic, traffic roots, communication networks, fire and fire damage can be mentioned, among other things, human waste can be related to domestic and foreign waste, lack of health and safety, development activities, crowded tourists.

Overall, the field studies of the author and the survey of the statistical community indicate that the village of Imamzadeh Ibrahim has various risks that the low area of this village, the slope of the chiropography has played a major role in these hazards and has increased with the increase of tourists these dangers exacerbated.
