

# Designing of Recreational-Touristic Complex of Einak Lagoon in Rasht With Sustainable Design

Saeed Karimi Pormehr\*,

Nature is a manifestation of emotions, passion, sentimentality and beauty. That's why man always tries to accompany it. This type of accompaniment with the nature can be well seen in the architecture of Guilan. Today, the development of the tourism industry and economic growth are closely related, so that some believe that tourism as the driving force of economic development is at the forefront of the country's sources of income, has been considered for the same purpose in recent years. Guilan province, despite its pristine nature, has a great talent in the field of tourism, but unfortunately, planning has not been done in terms of amenities and services for tourists. One of the measures that can be taken in this area is accommodation and leisure facilities to attract more tourists. To achieve this, the theoretical framework of the topic was first developed with library studies, including reference books and articles. Then, based on the field observations and shooting of the site, the subject under study was examined. The main purpose of this research is to design a tourist recreational complex in Rasht with the aim of respecting the nature of the area and the Aynak wetland. Respecting nature requires us to take advantage of nature with the strong potential of attracting tourists, and to take an effective step in the architecture of nature and the least intrusions in the environment.

**Keywords :** Recreation, tourism, Aynak wetland, respect for nature
