

Relationship between empathy and social support with problem solving style by mediating parenting women's parenting style

Somayeh Sojoodi Jorkouye*, Dr. Leyla Moghtader,

Abstract One of the challenges faced by women headed by women is the use of proper parenting practices in dealing with their children, which involves several factors, including empathy, perceived social support, and their problem-solving style. The purpose of this study was to investigate the relationship between empathy, perceived social support and problem-solving style with parenting style of female head of household. The research method was descriptive correlational. The statistical population of this study consisted of all women headed by the welfare organization of Guilan province in the last quarter of 2012 in 3420 people. Among them, using available sampling method and according to the conditions of entering and leaving the research 250 persons ed and methods of childbirth Bumerind (1973), sympathy by Davis (1983), perceived social support questionnaire Zimant et al. (1988), and the solution to the question of Cassidy and Lang (1996). The data were analyzed using Pearson correlation coefficient and multiple regression. Findings of the research showed that there is a positive and positive correlation between empathy, reassuring parenting style and authoritative parenting style (P
