

Investment bottlenecks in the private sector in Ardebil province

Saeid Abbasi*, Dr. Kamal isapour,

The present study was conducted to investigate the investment bottlenecks in the private sector in Ardebil province. In this study, what is important is the importance of investing in the private sector. This research was conducted using a survey method. In order to improve the validity of questionnaire metrics, formal validity was used. Reliability of Cronbach's alpha coefficient for all variables was higher than 0.70. The statistical population of this research is 850 investors in the city of Ardabil that have been referred to the General Directorate of Industries for investment 2011 to 2017. Using Morgan table, 265 people were selected by simple random sampling as sample size. Data were analyzed using descriptive and inferential statistical methods. Using spss software, after providing the matrix table, information was arranged in the form of one-dimensional and two-dimensional tables. The findings of the research indicate that, in terms of investors, management, cultural, economic, governmental, infrastructure and political barriers are considered as an obstacle in private sector investment in Ardebil province.

Keywords : Key words: Management barriers, cultural, economic, governmental, infrastructure and political barriers
