# Space spatial analysis of fire stations in Tarom city

SHapour Amarlou\*,

In the distribution of urban services, the criterion of the accessibility of inhabitants to urban services is less important, since many problems in today's cities can be regarded as unfair distribution of services in the past of cities, so that social justice is to be considered in accordance with the principles of space balance and reasonable distribution Urban services are a prerequisite for more and more urban planners and regional planners Considering the importance of the topic of urban services in this research, the study of fire stations has been studied. The method of descriptive-analytical study and the method of data collection have been field and library. The population of the study was in the villages of Tarom city. The spatial and spatial analysis of the fire stations in Tarom showed that urban areas have good access to fire service, but rural areas have a lot of problems due to dispersion and more than 40 rural areas outside the standard range To receive the service
