

Investigating the role of beekeeping in the economy of villages of Rezvanshahr city

Ali PourHamzeh Malalai*,shahram amirentekhabi,

Abstract Agriculture is one of the important sectors of economic activity that has been of particular importance in various stages of social development. In the pre-industrialization period, the agricultural community and its related activities formed the basis of the economic activities of human communities. However, because of its primitive nature, the method of production and tools was simple and initial, and it functioned as a closed and self-sufficient economy. Agriculture is the exploitation of land for the production and cultivation of beneficial plants and animals .The word and concept of agriculture includes all forms of agriculture and activities related to livestock breeding, horticulture, beekeeping and This research has been conducted by field and library method. The aim of this study was to investigate the role of bees in economic development of villages in Rezvanshahr city. The results show that bee has been able to play a significant role in income of countries, especially In the cities of western province of Gilan, which position. It is necessary in this regard, including the city of Rezvanshahr, which has good weather weather conditions. Honey bees can easily create employment for households along with incomes. Currently, 330 households do this as a major job and income generation. Being busy with the fact that the costs of beekeeping are low and the need for small initial capital is easy to use, this profession can be used for rural economic development.

Keywords : Key words: agriculture, beekeeping, economics, economic development, Rezvanshahr city
