

Compilation of structural relations of gender on the meaning of life, life orientation and marital satisfaction

Maryam Shafiee Haghshenas*,

The aim of this study was to develop a model of structural relations of gender on the meaning of life, life orientation and marital satisfaction in married students in Rasht city. The research method is correlation. Statistical population of all students in Rasht married Azad University in the academic year is 95-94. The sample 210 is based on the predictor variables and its subscales are ed by convenience sampling. In order to gather the data, a list of gender roles Bam (BSRI), Life Orientation Questionnaire (LOT-R) and the meaning of life and marital satisfaction questionnaire (ENRICH) short form was used. To analyze the data, Kolomogrov-Smirnov test, factor analysis and LISREL software was used. The results of the final structural equation model for measuring relationship between gender role structure with the meaning of life, life orientation and marital relationships showed that the positive effect of gender on the meaning of life. 6/83 t-test statistics obtained which is larger than the critical value t at the level of 5% to 1/96 and indicates that the observed correlation is significant. Life Orientation positive effect of gender on. 6/64 t-test statistics obtained which is larger than the critical value t at the level of 5% to 1/96 and indicates that the observed correlation is significant. Effects of gender on marital satisfaction has a positive effect. T test statistic 6/91 obtained which is larger than the critical value t at the level of 5% to 1/96 and indicates that the observed correlation is significant. The results showed that gender plays a significant difference in the meaning of life, life orientation and marital satisfaction.

Keywords : pattern structural relations of gender roles, the meaning of life, life orientation and marital satisfaction.
