

The relationship between psychological distress of parents with children coping heads of trains and railway Locomotive driver Iran

Emad Vazifeshenas*, Samere asadi,

If the family situation and unhealthy relationships and have a negative impact on children will have emotional and behavior disorders will be in the form. The aim of this study was to determine the relationship between psychological distress of parents with children coping. The research is descriptive and correlational. The study population included all heads of trains and railway Locomotive driver Islamic Republic of Iran, about 2,500 students with children ages 7 to 12 years. 335 heads of Locomotive driver train with children ages 7 to 12 years old students, who were selected by convenience sampling. Information required in this study, using questionnaires Children compatibility (Dokhanchi, 1377) and Sc90 questionnaire (Derogatis et al., 1973) were collected. Data using descriptive statistics and Pearson correlation coefficient were analyzed. The results showed that the impact factors and variables predictive of T statistics showed that the variables of aggression by a factor (-0/14), anxiety (-0/32), OCD (-0/21) and paranoia compatibility nose did not have children.

Keywords : mental confusion parents, the adjustment of children, families
