
Design of Astara Wetland Recreational Complex with Approach of Respect to Nature

seyed fazel ghavami mirmahaleh*, mohammad mehdi raeis samiei,

Abstract the beginning of creation, man has used the environment to meet his physical and mental needs, and the reference to nature has been the main solution to these needs. Clearly, in the ancient times and even up to the present century, a very rich source of tranquility is considered in the enchanting environments, as in many rituals, the promised paradise has been exaggerated by natural features. The practical implications of this have been in the way of the establishment of homes of kings in the old and wealthy, in their contemporary era. On the other hand, with the changing lifestyle of people versus the past and the availability of diverse vehicles that can travel to very remote locations in a fraction of the time, the tourism industry has faced increasing growth. As more and more people aspire to tourism, the need to build residential facilities has increased and this has caused damage to the natural environment. In order to respond to the need to build residential premises, as well as to refrain introducing damage to the natural environment, it seems necessary to write and formulate scientific and practical solutions, and this treatise has tried to analyze the parameters influencing this subject, scientific solutions And the practical explanation of the construction of a building in nature without destruction.

Keywords : Recreational Complex, Respect for Nature, Sustainable Architecture
