

Design of recreational-touristic complex of einak lagoon with the approach of nature-oriented architecture

Saeid Rajabnezhad ShahKhali*,

The importance of nature, as well as its preservation, is not overlooked by anyone, and nothing more worrisome than the gradual disappearance of the divine nature of Godhead. Today, the tourism industry is one of the key sources of income generation, employment and infrastructure development to achieve sustainable development. Investing in the tourist industry has economic, social and even physical effects for the cities. Unfortunately, in our country, despite the very high potential of tourism, unfortunately, there is no proper planning for amenities and amenities for tourists. Residential facilities and the creation of a place to attract more tourists are one of the measures that can be taken in this area. Considering the recreational-tourist collections on sites with potential and actual environmental values is also an effective step in this direction. To achieve this, the theoretical framework of the topic was first developed with library studies, including reference books and articles. Then, based on the field observations and shooting of the site, the topic under study was examined. Hence, the city of Rasht, with its natural marginal lagoon, offers the potential to attract tourism through proper management and design. Considering the importance of tourism, the main goal of this research is to design a tourist recreational complex in the north of the country with the approach of nature-oriented architecture. This approach makes us, with this powerful potential for attracting tourists, to take advantage of nature and take an effective step in the architecture of nature.

Keywords : Recreation, tourist, lagoon, naturalism
