

Analysis of spatial criteria of boy's secondary schools in district 2 of Rasht

Mohsen Taheri*,

Location of schools as one of the city's service centers is one of the issues that matters in the process of development and prosperity of any society. The present thesis has been carried out on the base of descriptive-analytical method and based on location criteria with the aim of explaining the spatial criteria of the educational spaces of secondary boy high schools in the 2nd district of Rasht. The present study aims to explain the spatial criteria of compatibility, desirability, capacity and affiliation of schools, explaining the status of existing educational spaces of schools, and presenting strategies and presentations in order to locate the educational spaces of the second boys' high schools in district 2 of Rasht. The results of the research indicate that the total of 10 schools studied, there were 61 compatible cases according to the intended usage, 23 cases of school distances were indifferent to the above-mentioned ones, 22 are maladaptive and 24 are completely maladaptive. Therefore, the usefulness of the usage distance to the schools is good and less than inconsistencies. Among the concerned schools, the compatibility level of Ayatollah Lakani high school was higher with the surrounding usages followed by Moein High Schools, Mirzakocheh and Shariati. Regarding the compatibility with the surrounding usage, it is possible to refer to Shahid high school (Imam Hossein) and Shahid Beheshti high school which has the least compatibility with the usage around them.
