

# **The Effect of Government Economic Policies on Earning Quality: A Case Study Justice Stock**

mohsen imeni\*,Fereydoon Rahnamay Roodposhti (PhD), Hashem Nikoomaram (PhD),

**Political Economy is a technical analysis of a modern economy to attend the importance of government policies on the economy. In other words, Political Economy is a branch of social science that examines laws related to the production and distribution of income and wealth, and its effects on the various stages of the growth and development of human society. Because of the fact that the objective of designing justice stock or the government policies for the fair distribution of wealth and income has been between different units of society, this research studies the effect of the government's economic policies on the quality of earnings, with an emphasis on justice stock design in the listed firms in Tehran Stock Exchange. Linear multivariate models have been used to test the relationship between research variables. Two hypotheses were also developed for research. The research sample consisted of 130 companies during the years 2009 to 2015 (period of 6 years) and the number of observations is 780 firm years. The results of the research indicate that Kothari et al. (2005) model has the highest ability to detect earnings management among other models. The results also show that the ownership of the justice stock brokerage has a significant effect on earnings quality.**
