

The Design of 5-Stars Hotel in Anzali Free Zone With A Nature-Oriented Approach

afsane seyed hooseini*,

Human beings have always benefited natural factors as an essential principle for shelter, housing, habitat, workplace or any kind of space. Human architecture in this historical period has clearly revealed both form and function. Among architectural approaches, Communication with nature has become an important and almost new discussion, but the effect of this is reflected on the architectural space at different mental and physical levels. The question that arises here is what factors can be used to design a 5-stars hotel in line with the nature-oriented architecture? The aim of this study was to provide environmental-friendly strategies to design the 5-stars hotel and to create a place nature lovers respect it. In the current study was used a questionnaire. It was distributed among 384 natives and tourist based on the Cochran's equation. The questionnaire was also designed via the Google Docs software, and was responded to according to the Likert scale. Design strategies were also designed to create a combination of nature with the interior for travelers and nature lovers using the balconies to the sea. Design strategies were considered in the design in respect to the questionnaire and the results of the research variables which obtained the background. Based on the results of the questionnaire, the shellfish form was first ed on the basis of priority. The sea wave form was the next design element based on the results of the questionnaire. This means that the form can be very impressive and effective by approaching the sea. It was also considered in the perspective design that all rooms in the accommodation unit would have the same proper view of the sea. Also in the western part, design measures were taken to prevent the disturbing West wind and rain.

Keywords : Hotel Design, Anzali Free Zone, Nature Oriented
