

Recreational Complex with a Sustainable Approach to Social-Cultural Youth

Elham Bayaky*, Hossein Safari,

The young population of Iran, along with the creation of unorganized metropolis, has led to the creation of marginalized areas with an inferiority culture, which has led to the creation of a class that is not attracted to the social system, and therefore opens a path to the opposite of excellence in the urban system. In addition, the creation of a marginal phenomenon is a threat to urbanization perfection. This avoids the creation of social interaction, the induction of architectural identity and the creation of social security in order to raise the quality of life, social order and flexibility, and ultimately social security by designing cultural cuisine with maximum planning in social interactions as the second home for Young people are interested in exchanging thoughts and thoughts, inclining creativity and promoting social and cultural processes, and ultimately creating social security as one of the most important indicators of social sustainability (which are considered as new architectural approaches) in the region Not informal accommodation. In this project, in order to design such a collection of Space Syntax, computer simulation (with Depth Map software), statistical analysis was used by SPSS software and quantitative analysis, descriptive and inferential analysis. The results show that factors influencing social sustainability in space design can be classified into two general categories of physical factors and activity factors. Factors that emphasize body dimension are because of the secrecy, territory, readability, comfort, and security, and factors such as environmental experiences, social presence and sustainability refer to the space dimension. In the following, in order to achieve the desired goal, the solutions to the design of this collection were considered.

Keywords : Key words: culture, architecture, social sustainability, security.
