# **The Spatial analysis of Driving Directions to Traffic Police Station in Zahedan**

Bahman Alipour\*,

**The current study is a descriptive and analytical study which was aimed to analyze the driving directions to traffic police station in Zahedan by spatial data. The aim of this study was to explain the current status of driving directions to traffic police station in Zahedan, to analyze the spatial metrics of the driving stations of Zahedan city and to provide suitable solutions for organizing them. The results indicated that the level of attention to the criteria such as compatibility, utility, efficiency (value and price of land) and comfort (distance and time of the people) and the measure of comfort, health and safety (applying appropriate environmental and sanitary regulations) have a great influence on locating of driving directions to traffic police station. As well as, more than 90% of respondents believe that the level of metrics of driving directions to traffic police station in Zahedan is very high and the type of services they can provide are regional. All of the experts who collaborated in this article stated that sub-urban divisions have a large impact on the number of regions, districts and neighborhoods in the location and construction of driving directions to traffic police station. The extent of the need to locate second and third degree driving station in the Zahedan city is moderate and very large, respectively. The results represented that quantitative and qualitative status of traffic control stations of Zahedan is very suitable, however, the degree of dispersion of the heterogeneous traffic power stations in Zahedan areas is low. The condition of service of these stations and the population covered by them is very favorable. Considering the spatial metrics to locate the driving stations and analyzing and overlapping them by spatial analyst functions in GIS and also adapting the results by the density and directions of the city expansion, we found that of the five driving stations in Zahedan, 3 of them are in perfect location and two one are in a relatively good location.**
