

# Political and Security Impact of Climate Change in Gilan Province

Mohammad Ebrahim Eslami Kajidi\*,

The phenomenon of climate change affects many aspects of human life. Modification and unnatural fluctuations of temperature and precipitation and other climate parameters have an impact on water resources and agriculture, forest and land use, health, energy and energy processes. Iran, like many other countries, has serious risks in terms of the consequences of change. In the Gilan province, among other things, the Gilan province has a favorable climate and is gradually exposed to these economic, demographic and security problems. The author of this thesis, using the descriptive method of analysis and library studies with the question "Climate change (drought and global warming)?" What are the consequences for Iran, especially in the province of Gilan? " The study seeks to study climate change and its consequences on Iran with an emphasis on Gilan province. Research findings indicate that the climate and natural conditions of Gilan have provided the appropriate capacities in the field of investment in the fields of agriculture, tourism, industry and services, population attraction and migration the central regions of the country, and the realization of security in its various dimensions. The climate change that the Gilan downturns are gradually endangering have a negative impact on the economic, demographic and security dimensions of the province and has caused many challenges for the province, which requires the adoption of appropriate policies and strengthening preparedness for the consequences of climate change. Indicates.
