

Designing a book house with the approach of social sustainability

Fatemeh Faraji Saravani*,

The subject of this thesis is the design of a book house and a space for engagement of the community. Architecture preserves its sustainability by providing appropriate responses to factors such as community, culture, tradition, environment, mental images of individuals, etc. The purpose of this thesis is identify ways to motivate libraries and to public welcome of libraries and identify effective measures of social sustainability in the design of cultural environments. Libraries play an important role in the education sector in order to take part in the scientific burden of community members. For this reason, efforts to resolve this part of the community's need and compensate for the shortage are necessary. Present thesis uses the descriptive case study method and library documents to review and analyze the architecture of various libraries and its response to the effective components in the library's socialization, such as strengthening social interactions, security, relaxation, and belonging to the place. Meteorological statistics were also analyzed and the climate designing solutions were extracted the results of this data. This research is important in order to pay attention to the needs of individuals of a family with a different age group as an important part of society, attention to accesses, the integration of spaces and attention to vision and perspective. This can increase the importance of community spaces, and paying attention to these cases in the design of libraries, will make people more presence in cultural environments.

Keywords : Library, Sustainable Architecture, social stability, Belong to the place
