Gulf Position in US Energy Strategy

gholamreza Pour Bagher*,

The vital importance of energy in the growth and prosperity of the national and international economy has made energy a major focus of global politics as a major power. The Persian Gulf is one of the regions with the largest energy resources. The Persian Gulf is a volatile region and the pace of regional energy flow to global markets will be hampered by the spread of instability. Despite the decline in US dependence on energy, domestic markets appear to be affected by energy price fluctuations originating in the Middle East. Therefore, the United States must prevent such fluctuations, which means that it will secure the transmission of energy flows the region while it occupies the Persian Gulf. To better understand this, by asking the question, "Will we see more US presence in the Persian Gulf in any government by reducing US dependence on energy?" Need it. ”We paid.
