

Spatial analysis Commercial use By emphasizing the pattern Location and space Rasht city

iman moghimi Zolpirani*,

Spatial function of urban land uses is one of the most important characteristics of space for determining the efficiency in the city. the present study aims to use descriptive and analytical method in survey survey and by investigating different applications in the rasht city, due to the phenomenon of polarity of the commercial use and local reviews. considering the recent decades of business use in the Rasht city of self - similar distribution, the location of location evaluation and spatial distribution of such uses determine the commercial polarity of the Rasht city. the research findings show that in the last decade (2006-2019) the most important trade job in the Rasht metropolis, industry and car services in, Mobile and computer services in Lakani, Manzarieh and Motahari streets, Eating, central texture and health services are located within the corner of Rasht City. according to the descriptive findings, the provision of services in a given framework is acceptable to citizens and various products are available in a range, but in terms of urban planning it is unsuitable to distribute business units to other uses, as well as congestion and congestion resulting inappropriate location, such as problems and problems

Keywords : Spatial analysis, Business land use, Spatial pattern, Rasht City
