

# **Predicting Quality of Caregiving in Marital Relationships Based on Attachment Styles and Marital Commitment Among Female Teachers of Qazvin Province**

Parnian Haji Mohammad\*, Dr. Samereh Asadi,

**The aim of the current study was to predict the quality of caregiving in marital relationships based on attachment styles and marital commitment among female teachers. It is a descriptive-correlational study. The population consisted of all the married female teachers of Qazvin province in 2018. A sample of 245 married female teachers was selected by cluster sampling according to the literature related to the subject, inclusion and exclusion criteria for the study. In order to collect the data was used the caregiving questionnaire (Kunce & shaver), the adult attachment interview (AAI), and Adams and Jones's marital commitment inventory. Data were analyzed using the Pearson correlation coefficient and the multiple regression. The results of the regression model indicated that there is a positive and significant relationship between the caring behaviors at the level of (P**
