

The Effect of Education Communication Attitudes on toward Marriage, The Expectation of Marriage and Tendency to Marry in Single Students of Siahkal City Universities

Khadijeh Ehsani*, Dr. Maghsood Faghirpoor,

The imagotherapy approach emphasizes identifying the effects of childhood on marriage dynamics and spouse ion and the importance of acquiring communication skills. The purpose of this study was to determine the effectiveness of communication visualization education on attitudes to marriage, expectation of marriage, and tendency to marriage among single students of siahkal city universities. This research is a quasi-experimental research and a practical purpose perspective. The statistical population of the study consisted of all single students siahkal university in the second half of the academic year 1397-98, with an approximate number of 1200 students, using the available sampling method, two groups consisting of control and experimental groups. Samples were ed. in order to collect the data, the subjects in the first stage of pre-test were divided into two homogeneous groups using the cut-off point of Attitude Questionnaire of Bartin & Rosen (1998), Expectation of Jonse and Nelson Marriage (1996), and Heidari et al (1383). Communication imaging training protocol, data analysis was performed using spss22 software and covariance analysis test. The results of covariance analysis showed that there was a significant difference between posttest scores on attitude of marriage, expectation of marriage and marriage tendency of the experimental and control group. On the other hand, the results of communication skills training on attitude toward marriage showed that communication visualization training improved the attitude of single students to marriage (P
