

Investigating the Status of Worker Sport with Emphasis on Developability Components Case Study of Guilan Province

Sanaz Babakhani Lashkan*, Morteza Rezaei Sufi,

The purpose of this study was to investigate the status of worker sport with emphasis on the extension components of the case study of Guilan province. The statistical population of this study is divided into two working and general societies. The working community of athletes active in factories in the province is 3600 people and the general community is considered indefinite due to the generality of the sports community and also because of the limited amount of community. Morgan's table is used for the sample of workers' sport community, which contains 246 samples and 355 samples for unrestricted community sport, Due to the irreversibility of some questionnaires, we distributed 400 questionnaires, of which 358 were returned to the sample population and we were provided with samples. This study is a descriptive correlational descriptive study on the purpose of data collection and is a case study in terms of field data. SPSS software will be used for data analysis and inferential analysis of data will be used to test the hypotheses using single sample t-test to determine the status of each index. The results showed that the most important strength of the country is the increase of sport disciplines in the national competitions and the monitoring of the ions of the national teams of the workers with 129/879 statistics. 888/870 of the Most Important Worker Sport Opportunities in the country Scientific attention to the ability of sports activities to increase the work efficiency of workers with the number of 97/620 and the most important threats in this sector the level of available spaces in the Workers Sport sector with the value of 75/560 and the most important strengths in the public sport sector are the appreciation and praise of individuals or groups or businesses active in the field of public sport with a statute of 19.169 and one of its major weaknesses is the creation of training grounds for proper motor activity patterns. The public space is the

creation of sport consulting stations with the value of 177/806 statistics and the most important opportunities of this sport is the attention to cost system and budget monitoring in public sports organizations with the value of 9/639. And one of the most important threats in this sector is the use of virtual social media to promote and promote public sport with a statistical value of 23/900.

Keywords : Worker sport, Public sport, Expansion
