

Relationship between perceived parenting styles and self-control capacity and emotional Self-regulation of juvenile offenders of the Rehabilitation Center

Tahmine Abdolahi*, Dr. Roya Babaei Kasmaei,

Happiness involves a number of mental concepts such as joy, pleasure, pleasure and pleasure that several variables involve in its creation, in which the role of self-governing and self-governing capacity is significant. The purpose of the present study was to determine Relationship between perceived parenting styles and self-control capacity and emotional Self-regulation of juvenile offenders of the Rehabilitation Center. The research method was descriptive correlational and predictive equation. The research population included all female secondary school students in Rasht during the second semester of the academic year of 2019 with an estimated number of 2,300. A sample size of 250 people was ed according to the Morgan table, the criteria for entry and exit of the research, using a multi-stage random cluster sampling method and The Oxford Happiness Questionnaire (OHI), Self-Controlled Tangjini et al (2004) and Self-regulating emotional of March (Salehi Morakani, 2006) completed. The data were analyzed using Pearson correlation coefficient and multiple regression. The findings of this study showed that there is a positive and significant relationship between self-management capacity and total self-regulatory emotional score and cognitive self-regulatory components, focus on changing position, focusing on emotional change, and positive mood increase with happiness of female students (P
